

Tuckahoe Hamlet Retail Center

Southampton, New York

Public Landscape Spaces

Urban architects and landscape architects are collaborating to provide complete design services for this new mixed use development. Pending approvals. The complex will become the center of the Tuckahoe hamlet in Southampton.

The landscape architectural aspect of the project involved the creation of four prominent public spaces that are in close proximity to central street and parking areas.

To disguise spatial constraints, buffer traffic, and unify the spaces, the spaces will feature pergolas that are extensions of Center buildings.

To enhance Center entry, attenuate noise, and create a sense of place, each space will feature a unique water feature. Resilient flowering perennial plantings will accentuate each space and unify the Center landscape.
