

Tuckahoe Hamlet Center

Southampton, New York

Schematic Site Plan 2009

Southampton Community Plaza Spaces

Urbitran architects and landscape architects collaborated on this Schematic Plan design for a proposed mixed-use development. Pending approvals, the complex would become the center of the Tuckahoe hamlet in Southampton.

The landscape architectural aspect of the project involved the envisioning four sizable public plaza spaces adjacent to Main Drive and parking.

To disguise spatial constraints, buffer traffic, and unify the spaces, the spaces will feature pergolas that are extensions of Center buildings.

To enhance Center entry, attenuate noise, and create a sense of place, each space will have a unique water feature. Resilient flowering perennial plantings will accentuate each space and along with the tree matrix help unify the developed landscape.
